MINING, BUSINESS AND STOCKS.

EAST ONTARIO AND ST.LOUIS ONTARIO

Merger of These Two Properties | Was the Scene of Excitement 21 | Application of Roasting Process Very Probable.

Few Have Been Heard to Oppose Plan -Rumors of Another Union, but It Lacks Confirmation.

Several consolidations of Park City properties are likely to be effected before very long and agencies are at work in an effort to organize some strong companies.

One merger, which, it is said, lacks but little of being consummated is between the East Ontario and the St. Louis Ontario. It was learned today that with a few possible exceptions the stockholders have not raised a disent-ing voice against the proposed union; and it is believed that these will see that it is for the best interests of all concerned that the plan of consolida-tion should be carried out.

It is said that the matter is practically up to the head officials of the two companies, who are in St. Louis, to say whether the scheme shall go through or not.

The basis upon which the merger is

proposed was not ascertained, but with the two properties bunched together, the amaigamated company would con-trol an area of 320 acres of ground, H. C. Brownlee is the manager of the St. Louis-Ontario, for which a new hoist was recently ordered. The plant will likely be installed in the very near

There are persistent rumors afloat that an effort is being made to make the California and Scottish Chief properties into one; to be operated by a strongly financed corporation. No verification of the report could be obtained today; however, a well known mining man asserts that he has good reasons to believe that something of the kind is

Probably this accounts for the examination of the California mine made by the Western Exploration company's staff of experts recently. It is a known fact that Messrs. Kimberly and Buhl, the Pennsylvania capitalists, who are the leading spirits in the Western Exploration, have become shareholders in the Scottish Chief.

STOCKS WERE SLUMPISH. Daly and Daly-Judge, However, Held Stronger on 'Change.

The market for mining stocks was slumpish today. Everything was off and no matter how closely the big blackboard was scrutinized there was nothing to show improvement in value over yesterday's quotations, with the possible exception of Daly and Dalythe former stock went up as high as \$3.72. It could not hold to that price, however, and closed about 8 cents higher than the last Mercur held up to even figures and there was practically no change in California. New York continued its journey down the toboggan, selling as low as 151/2 cents. Daly-West sold un-

der yesterday's quotations.

The closing quotations and sales posted after the brokers had left the floor were as follows: REGULAR CALL SALES.

DISCOVERY IN DUTCH CANYON

CAPT. SPRINGER'S BOULDER DONAHUE'S LATEST FIND.

Said to Have Brought \$800-Heber Citizens Believe They Have Found The Old Rich Ledge.

Some 21 years ago Captain A. D. Springer, who was well known to all Salt Lakers in those days, discovered a boulder of rich gold ore in Dutch Canyou, which extends from Bonanza Flat, near Park City, to Snake Creek, which winds its course down the eastern slope of the Wasatch range of mountains.

Captain Springer realized from the rock, which weighed approximately 520 pounds, the net sum of \$800. It was "spattered" with gold and many old timers will recall the excitement it caused. A wild rush was made to the canyon and claims were staked out everywhere but no one was fortunate enough to discover the ledge from which the boulder is supposed to have come.

A party of Heber citizens believe that they have found this lost ledge and have acquired a group of 12 claims upon which they will prosecute development work just as soon as the snow disappears so that passage up and down the canyon will be made easy. A contract will be let for 140 feet of tunneling. The ledge was discovered only a short time ago by William Buys, of Heber, and a party of associates.

The ground was examined last week by Joseph S. Free and he made a favorable report to the Heberites and se-cured an interest in the ground him-In speaking of the property to-Mr. Free stated that he found a well-defined ledge. The ore is similar in character, he states, to that found by Captain Springer many years ago, consequently those interested feel encouraged to open up the property to determine how much merit it really

FOR LOW GRADE ORES. A Kansas Professor Discovers a New Process.

A member of the faculty of the State University of Kansas, Prof. Lucien I. Blake, has discovered a new process for the treatment of low grade ores. It is claimed that the invention has been applied to zinc bearing ores and that the experiments have been remarkably successful. The extraction is said to st perfect and the cost a mere nothing compared to older methods. The professor believes he has over-

come some of the great difficulties that have been encountered in the past in the handling of low grade zine ores to The potent factor employed in Prof. Blake's machine is the use of statical

electricity. A 15-ton experimental plant has been put up in Denver. It came to the notice of the Post, which says:

"As showing some of the things the machine will do it may be stated that ores from Sonora, Mexico, which yield under ordinary methods of separation nly \$9 a ton profit are caused by this actual to yield \$25 a ton profit above charges. Out of a lower grade ore nat comes from Leadville and is considered a waste product the Blake ma-ekine makes it possible to realize \$8 a This ere exists in millions of tons round Leadville and in other parts of Colorado. It is considered so worthless that it is thrown out on the dump. There is one dump at Leadville that contains 250,000 tons of it.

"Electricity has been applied before in the separation of ores, but never in the way Prof. Blake has applied it. The idea hitherto has been to use magnitude of the control nets and attract certain particles out of the crushed ore. Prof. Blake has take: just the opposite method and uses static electricity, which makes some of the

ore particles jump away.
"People who have sone to high school as far as a little smattering of na-tural philosophy will recall static electricity with pleasure as an old friend. It used to come by the turning of a big glass wheel and be gathered out of brass knobs into Leyden jars, hence one could be startled with shock as a spark jumped out on the

inger.
"Prof. Blake uses a similar apparatus He makes electricity in the good old way, only multiplying the wheels into a more complex machine. It is also possible to use the modern spark coil developed in recent years as accessorie

"He conducts this static electricity to revolving iron bar, an inch and a half n diameter. Down comes the powder-id ore, sitting slowly into this revolving The electricity makes the iron gold particles jump away several inches, where they fall itno a trough leading to one reservoir. The zinc par-ticles are not thrown by the electricity and they fall straight down into another trough. Thus the separation is

The machine itself looks something like a big printing press. Its construc-tion is inexpensive, it being made large y of wood, and its main features are troughs to sift the ore down on the re-volving bar and other troughs to catch the ore again after it has been divided."

ELGIN TUNNEL.

Contract Let to Continue It 200 Feet Further. Special Correspondence.

Eureka, Jan. 29.—A contract has been given to S. T. Kershaw for advancing the tunnel in the Elgin mining property, located near Diamond. The tunnel will be driven another 200 feet, the work being done through the Old Susan tunnel, which is already in 800 feet. When a depth of 350 feet has been attained it is expected to tap the Sham-rock ledge on the Elgin property. Mr Kershaw with a force of men will push the development work rapidly. The Eigin mine is located just south of the Buckeye property and is in a favorable location for striking good pay rock.

An assessment of 4 of a cent a share has been levied on the stock of the Madeline mining property, so as to continue work all winter. Manager Caldwell visited the property Sunday and was wall pleased with the week all pleased with the week wall pleased wall pleased with the week wall pleased wall pleased with the week wall pleased with

Special Correspondence.

COLD ORES OF

Pike's Diggings, Nev., Jan. 28 .-Closely following the recent disclosures in the Independence mine is another important strike which has been made in this camp by J. C. Donahue, who owns a group of claims on the west of the property named. While prospecting his ground Mr. Donahue came upon a huge boulder protruding from a ledge which looked like ore to him. He had an assay taken and was surprised to learn that it carried values of about \$150 gold to the ton. Hornings of the rock had been taken before, but no col-ors came out in the pan and for this reason it was supposed to be of no val-It occurred to Mr. Donahue that he would try a fire test and it was by throwing a piece of the ore into the hot coals in a common stove and leaving it there over night that he discovered that it contained good gold values. The next morning, on taking the piece out of the stove, there were evidences of metal apparent, so the roasted particles were reduced to a horning. The result was

a large string of colors. This virtually means another strike for the Independence company of Salt Lake, as the ledge runs easterly and westerly, and crops within a few feet

Mr. Donohue has not determined the size of the rich ledge, but as some of the boulders will weigh 150 to 200 pounds it is safe to say that the vein will be a strong and permanent one It is very evident that all of the richer ores of this camp must undergo a roasting process while under treatment. Since Mr. Donahue's experience. Iners

and prospectors are finding ore in many places, which, heretofore were considered barren. The fact that the fire must be applied has been demonstrated in the In-dependence and Jumbo.

Until recently, the prospectors would send only such ores as would horn, for assay, as it was considered that the gold ought to be free in all surface rock, and if it would not horn, it was not worth assaying, but the three re-cent strikes prove this to be a mistake.

ANOTHER B. W. & H. SHIPMENT This Sevier County Mine is Making a Fine Showing.
